

ELATEVE

THE SHIFT — PERI & MENOPAUSE

The Baseline Navigator

You're likely in the very early, subtle stages of perimenopause, or your hormones are currently well-balanced. Now is the perfect time to build your longevity foundation before major shifts begin.

Your Tips & Tricks

- 01** Start strength training now if you haven't — bone density work compounds for decades.
- 02** Build a cooling sleep setup before you need it (breathable bedding, temperature regulation).
- 03** Get a baseline hormone panel with your doctor so you have something to compare against later.
- 04** Introduce adaptogens or magnesium now as a gentle foundation, not a fix.
- 05** Keep a symptom log monthly — subtle shifts are easiest to catch early.
- 06** Revisit this assessment every few months as your baseline shifts.

Curated For You

Oura Ring 4

Start tracking sleep and recovery trends now, before symptoms shift.

Pure Bamboo King Sheet Set

Temperature-regulating sleep, built in as a habit early.
